DOUBLE THE WATER FLOW

The Orca™ nozzle allows you to connect 1 hose and 1 truck per end of the Orca sewer nozzle to double the water flow.

ORCA™ SEWER NOZZLE

CLEAN FASTER & MORE EFFICIENT

- DUAL Truck capabilities that allow you to use one truck at 1 manhole and another truck downstream.
- ORCA was design to accommodate flows from 60 GPM to 400 GPM and use multiple trucks when you need the power to clean sewer or storm lines faster.
- QUALITY STAINLESS steel construction with our same tube technology that allows turbulent free water to transport the water jets longer and farther down the line.
- We use one swivel for the operation of two trucks at opposite ends of the pipe.
- ORCA was developed for the demand of higher flow trucks and to combine the use of two trucks for more efficient cleaning.

WHY Nozzteq? Because our Equipment is Engineered for Long Lasting Performance!
